

Racing Price Monitor

Now, you will know racing prices at every minute for most of the betfair races

This software will provide you price comparisons during the day for almost all horses running on betfair

Hi,

Thanks for your interest in Racing Price Monitor.

In our betting headquarters, we continue to make all efforts to make your betting more profitable and easier.

We launched racing price monitor in 2015 as desktop application and it was very well received by most of our clients and now we have come up with the web based application and covering almost all the races on betfair and not just UK and Ireland.

Today, there is no such tool in market where you can find the comparison of horse prices between two data points - say 10:00am UK and then 12:45am UK.

But we have changed that with our new product.

Racing Price Monitor

As the name suggests, Racing Price Monitor is monitoring all Betfair horse race meetings right from 6:00 am UK time and till the last race for the day is over. And it does that monitoring all seven days of the week and all 12 months of the year.

Without wasting any more time, let me take you into the software interface.

On the left hand side, you will see all the races for different countries. There are primarily two tabs we have in this software **Races & Runners** and **Steamers & Drifters**.

We will discuss the Races and Runners tab first.

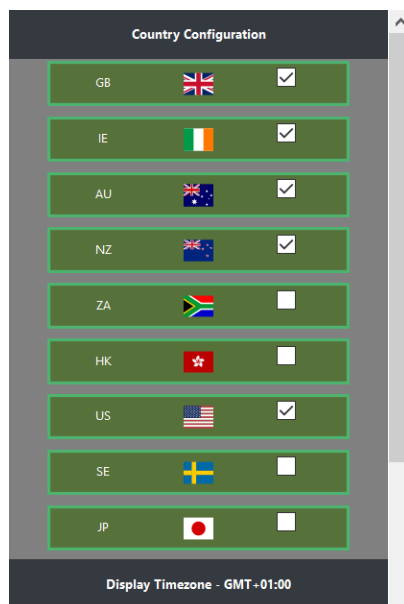

In this tab, you will see the price movement of all horses for all races for any data point (time) during the day.

When you click on the Settings button

You will get the following screen after clicking sub button for time options.

You can configure country

you can see that we have six time set options which we can use in order to capture prices at these time slots.

Display Timezone - GMT+01:00

Understanding the columns and headings now:-

Selected race - it will show the course, time, type of the race.

Runner - Horse Name

Current Price - it will show the current price on offer for that horse. Once the race is over, it will show the last price available. (Please remember it is not Betfair Starting Price (BSP) but last price on Betfair before the BSP price.) you can assume it is price 1 second before the start time.

Racing Price Monitor is showing only Betfair prices. No Bookies prices here.

It will always reflect the price which is best back price where the money is available to be matched. In short, it is considering the prices as highlighted in the circle below.

<input type="checkbox"/> Betfair Starting Price (SP)									
Selections: (8)		103.8%		BACK	WoM	LAY	95.8%

Stafford Charlie		23	27	34		75	90	110	
		\$7	\$5	\$4		\$6	\$4	\$6	

Other good thing about the software is that you can change the T1 to T6 settings in interval of minimum 1 minute or more and you can also change the T1 to T6 once the race has been run, just to know the price at other times.

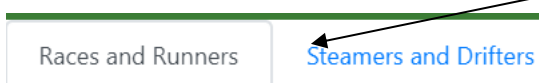

And you can all the race data for any given day till mid night UK and then it switches over to next day and all previous data is either gone or you can save the data in your excel sheet before the switch over.

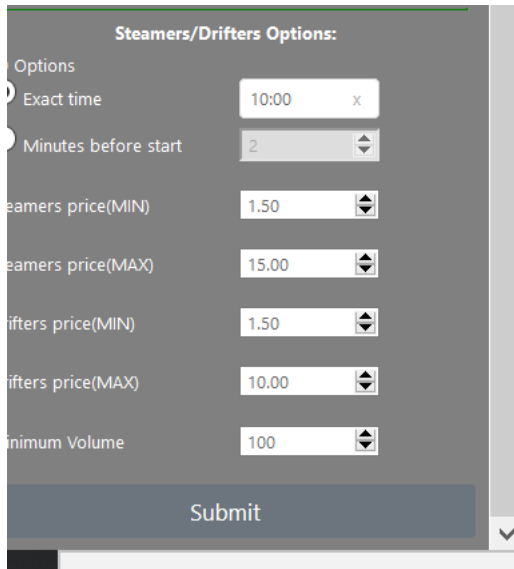

This is the excel button and it will save all required data from the screen on to your pc.

Refresh button: There is auto refresh in every 15 seconds but if you want to refresh much earlier than 15 seconds, please press refresh. **I don't think you really need to use refresh button.**

Let's look at what we have on another tab Steamers and Drifters.

Now, it is important to note about T0.

Steamers/Drifters Options:

Options

Exact time 10:00 x

Minutes before start 2

Steamers price(MIN) 1.50

Steamers price(MAX) 15.00

Drifters price(MIN) 1.50

Drifters price(MAX) 10.00

Minimum Volume 100

Submit

T0 is the time from where all the steamers and drifters will be measured

you can see all the horses for the day (both steamers and drifters) in the descending order of % movement. So, both biggest drifters and steamers will get highlighted at the top. Their % movement is being measured between the current price and price at say, 10:30 am UK time, whatever time you select.

12	Tampa Bay Downs	R9: 02:10	R Next Roll	2.04	2.08	1.96%

And it changes continuously with every auto refresh and the runners which have been run will get automatically deleted.

Now, as a user of this software - you may want only horses for steamers and drifters which has decent amount of money matched

So, we have an additional feature where you can decide the minimum volume matched for that horse to be either qualified in steamer or drifter category.

Please remember, we are considering this extra feature on volume matched only for steamers & drifters side.

You can enter the value here. i.e. if you enter 1000, it means only those horses will find their place in steamers & drifters list which has minimum of \$ (AUD) 1000 matched. Yes, this takes values in AUD \$ only. So, keep in mind the Australian \$ when you input value here.

Intent of this filter is to ensure we don't get poor liquidity horses in our list which will obviously impact the % movement of prices and hence impact our steamers and drifters list. I would recommend keeping it 100 (you can put 1,000 by we find this limits the amount of horses that are trending in later races in Australia especially). This will give you more horses to work with and spot trending horses early.

The Steamers & Drifters list constantly update itself with every auto scan and you will know the best steamers and drifters for upcoming races at any given point in time.

Racing Price Monitor is really available at very cheap price for the yearly subscription. This is the only software in the world which can provide you visibility to Betfair price at every minute for all betfair races.
